check of solution	points
Code is not an Arduino sketch, the code is not compiled, take an unmodified example from the library	0
slightly modified example, compiled	5
Deeply modified code, compiled, nothing goes into Serial or does not match the required format	10
This is like 10, but the code makes the analysis and the right direction of thought clear	15
The output meets the requirements, but clearly incorrect data is output (all the same or of an inappropriate type, for example, float without a fractional part)	20
The output meets the requirements, the data is incorrect, but there was movement in the right direction	25
Othes points for solution subtasks see at text of the task	not up 100
